ELSEVIER

Comput. Methods Appl. Mech. Engrg. 117 (1994) 443–446

Computer methods in applied mechanics and engineering

Subject index of Volume 117

Boundary element methods
Boundary element solution for steady and unsteady Stokes flow, Y. Abousleiman and A.H.-D. Cheng 1– 13
Efficient analytical integration of symmetric Galerkin boundary integrals over curved elements; elasticity formulation, C. Balakrishna, L.J. Gray and J.H. Kane 157–179

Dynamics
Semi-discrete and fully discrete Galerkin methods for the vibrating Timoshenko beam, B. Semper 353–360

Elasticity
Efficient analytical integration of symmetric Galerkin boundary integrals over curved elements; elasticity formulation, C. Balakrishna, L.J. Gray and J.H. Kane 157–179
Techniques for stress- and strain-controlled homogenization of inelastic periodic composites, C.C. Swan 249–267
A new class of multilevel decomposition algorithms for non-monotone problems based on the quasidifferentiability concept, G.E. Stavroulakis and P.D. Panagiotopoulos 289–307
Three-dimensional stress analysis of orthotropic and cross-ply laminated hollow cylinders and cylindrical panels, J.Q. Ye and K.P. Soldatos 331–351
Semi-discrete and fully discrete Galerkin methods for the vibrating Timoshenko beam, B. Semper 353–360

Finite difference methods
Three-dimensional vortical flow past bodies of revolution with conical afterbodies, H. Miyata and N. Ogawa 269–288
Aspects of conservation in finite element flow computations, P. Hansbo 423–437

Finite element and matrix methods
High-temperature bending, buckling, and postbuckling of laminated composite plates using the natural mode method, J. Argyris and L. Tenek 105–142
Efficient sensitivity analysis for structural optimization, U. Kirsch 143–156
Computation of cross coupling stiffness in a whirling pump, H.G. Wood III and A.A. Thaker 181–194
Finite element derivative recovery by moving least square interpolants, M. Tabbara, T. Blacker and T. Belytschko 211–223
On the limitations of bubble functions, L.P. Franca and C. Farhat 225–230
Non-linear stiffnesses in analysis of planar frames, Y.-B. Yang and L.-J. Leu 233–247
Finite element analysis of transient creep problems, J.N.C. Guerreiro and A.F.D. Loula 309–329
Semi-discrete and fully discrete Galerkin methods for the vibrating Timoshenko beam, B. Semper 353–360
An explicit hybrid-stabilized 9-node Lagrangian shell element, K.Y. Sze 361–379

Explicit interpolation formulas for the Bell triangle, M. Okabe 411–421
Aspects of conservation in finite element flow computations, P. Hansbo 423–437
Parallelizable block diagonal preconditioners for the compressible Navier–Stokes equations, L.C. Dutto, W.G. Habashi and M. Fortin 15– 47
Application of polycrystal plasticity to sheet forming, A.J. Beaudoin, P.R. Dawson, K.K. Mathur, U.F. Kocks and D.A. Korzekwa 49– 70

Fluid mechanics
Boundary element solution for steady and unsteady Stokes flow, Y. Abousleiman and A.H.-D. Cheng 1– 13
Parallelizable block diagonal preconditioners for the compressible Navier–Stokes equations, L.C. Dutto, W.G. Habashi and M. Fortin 15– 47
A spectral algorithm for the Stokes problem in vorticity–vector potential formulation and cylindrical geometry, R. Pasquetti and R. Bwemba 71– 90
Computation of cross coupling stiffness in a whirling pump, H.G. Wood III and A.A. Thaker 181–194
On the limitations of bubble functions, L.P. Franca and C. Farhat 225–230
Three-dimensional vortical flow past bodies of revolution with conical afterbodies, H. Miyata and N. Ogawa 269–288
Aspects of conservation in finite element flow computations, P. Hansbo 423–437

Incompressible and near incompressible media
A spectral algorithm for the Stokes problem in vorticity–vector potential formulation and cylindrical geometry, R. Pasquetti and R. Bwemba 71– 90
Semi-implicit Taylor–Galerkin finite element methods for incompressible viscous flows, B. Tabarrok and J. Su 391–410

Matrix calculus
High-temperature bending, buckling, and postbuckling of laminated composite plates using the natural mode method, J. Argyris and L. Tenek 105–142

Modern computer architecture
Parallelizable block diagonal preconditioners for the compressible Navier–Stokes equations, L.C. Dutto, W.G. Habashi and M. Fortin 15– 47

Nonlinear mechanics
Application of polycrystal plasticity to sheet forming, A.J. Beaudoin, P.R. Dawson, K.K. Mathur, U.F. Kocks and D.A. Korzekwa 49– 70
Applications of a generalized complementary energy principle for the equilibrium analysis of softening structures, S. Plaxton and J.E. Taylor 91–103
High-temperature bending, buckling, and postbuckling of laminated composite plates using the natural mode method, J. Argyris and L. Tenek 105–142
Non-linear stiffnesses in analysis of planar frames, Y.-B. Yang and L.-J. Leu 233–247
A new class of multilevel decomposition algorithms for non-monotone problems based on the quasidifferentiability concept, G.E. Stavroulakis and P.D. Panagiotopoulos 289–307
Finite element analysis of transient creep problems, J.N.C. Guerreiro and A.F.D. Loula 309–329

Numerical solution procedures
Parallelizable block diagonal preconditioners for the compressible Navier–Stokes equations, L.C. Dutto, W.G. Habashi and M. Fortin 15– 47
A spectral algorithm for the Stokes problem in vorticity–vector potential formulation and cylindrical geometry, R. Pasquetti and R. Bwemba 71– 90

Efficient analytical integration of symmetric Galerkin boundary integrals over curved elements; elasticity formulation, C. Balakrishna, L.J. Gray and J.H. Kane 157–179
Computation of cross coupling stiffness in a whirling pump, H.G. Wood III and A.A. Thaker 181–194
Extending substructure based iterative solvers to multiple load and repeated analyses, C. Farhat, L. Crivelli and F.X. Roux 195–210
Finite element derivative recovery by moving least square interpolants, M. Tabbara, T. Blacker and T. Belytschko 211–223
On the limitations of bubble functions, L.P. Franca and C. Farhat 225–230
A new class of multilevel decomposition algorithms for non-monotone problems based on the quasidifferentiability concept, G.E. Stavroulakis and P.D. Panagiotopoulos 289–307
Three-dimensional stress analysis of orthotropic and cross-ply laminated hollow cylinders and cylindrical panels, J.Q. Ye and K.P. Soldatos 331–351
Semi-discrete and fully discrete Galerkin methods for the vibrating Timoshenko beam, B. Semper 353–360

Optimization and design of structures
Efficient sensitivity analysis for structural optimization, U. Kirsch 143–156

Plasticity
Application of polycrystal plasticity to sheet forming, A.J. Beaudoin, P.R. Dawson, K.K. Mathur, U.F. Kocks and D.A. Korzekwa 49– 70
Applications of a generalized complementary energy principle for the equilibrium analysis of softening structures, S. Plaxton and J.E. Taylor 91–103
Techniques for stress- and strain-controlled homogenization of inelastic periodic composites, C.C. Swan 249–267

Shells and plates
High-temperature bending, buckling, and postbuckling of laminated composite plates using the natural mode method, J. Argyris and L. Tenek 105–142
Three-dimensional stress analysis of orthotropic and cross-ply laminated hollow cylinders and cylindrical panels, J.Q. Ye and K.P. Soldatos 331–351
An explicit hybrid-stabilized 9-node Lagrangian shell element, K.Y. Sze 361–379
Explicit interpolation formulas for the Bell triangle, M. Okabe 411–421

Solution of differential equations
Three-dimensional stress analysis of orthotropic and cross-ply laminated hollow cylinders and cylindrical panels, J.Q. Ye and K.P. Soldatos 331–351
Large deflection analysis of plates under thermal loading, R.M. Lin, M.K. Lim and H. Du 381–390

Solutions of ordinary and partial differential equations
Three-dimensional stress analysis of orthotropic and cross-ply laminated hollow cylinders and cylindrical panels, J.Q. Ye and K.P. Soldatos 331–351

Stability in structural mechanics
High-temperature bending, buckling, and postbuckling of laminated composite plates using the natural mode method, J. Argyris and L. Tenek 105–142

Structural mechanics
Extending substructure based iterative solvers to multiple load and repeated analyses, C. Farhat, L. Crivelli and F.X. Roux 195–210

Finite element derivative recovery by moving least square interpolants, M. Tabbara, T. Blacker and T. Belytschko 211–223
Techniques for stress- and strain-controlled homogenization of inelastic periodic composites, C.C. Swan 249–267
Three-dimensional stress analysis of orthotropic and cross-ply laminated hollow cylinders and cylindrical panels, J.Q. Ye and K.P. Soldatos 331–351
Semi-discrete and fully discrete Galerkin methods for the vibrating Timoshenko beam, B. Semper 353–360
An explicit hybrid-stabilized 9-node Lagrangian shell element, K.Y. Sze 361–379

Subsonic flow
Semi-implicit Taylor–Galerkin finite element methods for incompressible viscous flows, B. Tabarrok and J. Su 391–410

Systems of linear and nonlinear simultaneous equations
High-temperature bending, buckling, and postbuckling of laminated composite plates using the natural mode method, J. Argyris and L. Tenek 105–142
Extending substructure based iterative solvers to multiple load and repeated analyses, C. Farhat, L. Crivelli and F.X. Roux 195–210

Thermal effects and thermodynamics
High-temperature bending, buckling, and postbuckling of laminated composite plates using the natural mode method, J. Argyris and L. Tenek 105–142

Transport phenomena
Aspects of conservation in finite element flow computations, P. Hansbo 423–437

Viscoelastic and viscoplastic media
Finite element analysis of transient creep problems, J.N.C. Guerreiro and A.F.D. Loula 309–329

Viscous flow
A spectral algorithm for the Stokes problem in vorticity–vector potential formulation and cylindrical geometry, R. Pasquetti and R. Bwemba 71– 90
Three-dimensional vortical flow past bodies of revolution with conical afterbodies, H. Miyata and N. Ogawa 269–288

Workhardening structures
Applications of a generalized complementary energy principle for the equilibrium analysis of softening structures, S. Plaxton and J.E. Taylor 91–103
